About Us

Alert Safety Technologies (AST) believes that everyone has the right to be able to reach safety from any hazardous situation. We are therefore committed to providing the most innovative Emergency escape solutions possible.

AST was formed in July 2000 to design, develop and commercialise the **Safescape® emergency evacuation system**. Safescape® allows for windows to be used as an emergency escape route either as an additional exit or as an alternative route if doors become jammed or are inoperable.

The company was founded by the Directors of **McGregor Young Limited** and **SAFEGLASS® (Europe) Limited**. The founders have over 50 years experience of designing and creating new products and services. Our strong team has driven the company forward to become the market leader in emergency escape technology.

McGregor Young Limited

McGregor Young are the largest manufacturer of transport related glazing in the UK. The Company has a turnover of £6 million, employs 150 staff in 3 locations in Scotland. They

are principal suppliers to the UK's largest bus manufacturer and have a number of other prestigious clients both in the UK and abroad.

With a product range of 128 different window designs for buses, railway and mini cab conversions, the company's strengths lie in quality of design and production coupled with a keen focus on customer service.

SAFEGLASS® (Europe) Limited

SAFEGLASS® (Europe) Limited was set up to develop and commercialize a new polymer based material, Safeglass. Safeglass mimics the characteristics of glass, but when broken, forms pieces that do not cut or cause injury. It is used in break glass devices where the glass has to be broken to operate the device, such as fire alarm call points, emergency equipment covers, access panels, door release covers, kick-out panels.

SAFEGLASS® supplies numerous customers in Europe within the rail and bus sector such as Virgin, Stagecoach and First Group. Customers also include train builders such as Bombardier, Siemens and Alstom.

A strong customer relationship combined with a quality product has enabled SAFEGLASS® to establish itself as the premier supplier of "break glass" in Europe.
