### Our Partners

Our knowledge of the transport market is considerable and has allowed us to develop the Safescape® products with input from some of the sectors largest train and bus builders/operators.

Our collaboration with **Atkins Rail** one of the worlds biggest rail engineering consultants, has given us access to Atkins network of offices in 52 countries, giving us valuable local knowledge and market information.

## Partnership History

- **Atkins Rail** were appointed by AST in 1999 as rail consultants for the Safescape® system.
- AST were invited to submit a paper to **HSE** as a consequence of the Cullen Report in 2000. The Cullen Report was instigated by HSE after the Paddington rail crash.
- Final designs of Safescape® system were prepared in consultation with **Stagecoach** over a two and a half year period.
- We have also been invited to submit designs to the **Rail Safety Standards Board**, a new body which has been set up to set the safety standards for the UK rail industry.
- **Her Majesty's Rail Inspectorate** has given us "no objection to proceed" with live testing in association with **South West Trains** in 2001.
