Safescape® for Bus

Safescape provides an alternative to the hammer that cannot be stolen. Using Safescape instead of hammers will make emergency escape through the break glass window quicker and could therefore save lives.

Key Features

- Cannot be stolen
- Fast, efficient emergency escape at the push of a button
- Easy to use
- Easy to fit within 30 minutes without bus alteration

- Uses existing toughened glass bus windows
- Safety film option makes escape easier and faster
- Can be fitted to most shapes of Emergency Window

The Bus Retro Fit Range

In addition to the basic Safescape® unit, this system contains a driver's over-ride device. If the button is pressed when there is no emergency, an alarm is activated in the driver's cab. The driver can cancel the action from the cab, thus preventing activation.

Data Sheet - SAFESCAPE® DGSBA01 - Standard Unit

This is the basic, stand alone Safescape® unit. To operate, break the screen and press the button. The window shatters and can be pushed away. Ideal for use in areas away from the public, such as in the driver's cab, or on transit system where misuse is low.
